

Providing 21st Century Home Health Care

Welcome to Voltamac!

We provide 21st Century Home Health Care

A consumer revolution is underway in U.S. healthcare. With advanced technology, individuals have gained access to more information and are empowered about their healthcare choices of providers that deliver the best care. Patients have indeed become the undisputed center of care. At Voltamac, we understand this shift.

Why Voltamac?

Voltamac is a unique and solutions-driven home health management company that offers proactive, high-touch, outcomes-oriented, scalable home health and related services to patients. As a leading provider, Voltamac possesses an extensive resources and unmatched history of providing innovative care and care management services supported by technology (telehealth services, etc.). This has resulted in clinical quality, reductions in utilization (including acute admits/re-admits or ER visits), improved risk scores and patient satisfaction.

Making a Difference

Our unique understanding of the changes in the model of care from **PROCEDURE > RECOVERY > DISCHARGE** to the prevailing value-based model of care of **PROCEDURE > DISCHARGE > RECOVERY**, stands out. While **"RECOVERY"** has moved past **"DISCHARGE,"** the change has ensured an ever-increasing demand for outcome-oriented home health care. Our response is to provide care models that are personalized and patient-centered. Our understanding of the human element of healthcare – what motivates people and what help they need – also stands out

Our philosophy of patient engagement is simple and based on the following principles:

- Facilitate a new element to patient care – **convenience**
- Ensure **access** to meaningful health information
- Encourage **self-management** and promote **independence**
- Provide **continuous** and **coordinated** care
- Refactor the way in which home health providers **interact** with patients

Our Telehealth Capabilities

And thanks to new technological advances, we offer round-the-clock support for patients and families as never before with the same of level of privacy and accessibility. Through our strategic combination of services (medical and non-medical), care models and technology, we engage and empower our patients and families as active collaborative partners. This includes a Patient/Family portal (of course), personal health records, secured email and text messaging, online patient health education videos, telehealth systems.

Our Care Process

Our care begins with an in-home comprehensive assessment to determine which combination of services and technology will best meet patients and your loved one's needs—whether that's in-home sensors that help keep track of a loved one who wander or telehealth monitoring systems. We focus on finding the best combination of care and technology to make each of our clients as safe, comfortable, and independent as possible—while reducing overall costs.

Who We Serve

Voltamac serves all payers including accountable care organizations (ACOs), Worker's Compensation Board, commercial health plans, managed care organizations, hospitals, physician group networks, solo medical practitioners, assisted living facilities, IRFs, nursing homes, congregate facilities, individuals and families, etc..

Care YOU Can Trust.

Voltamac Home Health Services employs only the most experienced and highly trained professionals, certified to meet Medicare's high standards of care. All of VHHS's caregivers and staff, from physician to RNs to support staff, are licensed, credentialed, bonded and insured. Before hiring, potential Voltamac Home Health Services caregivers undergo a strenuous background check that goes beyond New Jersey state minimum requirements, including nationwide sex offender checks, 7-year address history, and arrest records.

To ensure our clients receive the care they deserve, Voltamac Home Health Services utilizes client satisfaction surveys on a regular basis to make sure the care we provide is meeting client standards.

how we help

Our Telehealth Services and Technologies

Remote Patient Monitoring (RPM)

With our signature remote patient monitoring (RPM) systems, patients are able to capture biometric data using digital peripherals and devices such as blood pressure cuffs, pulse oximeters, glucometers, temperature probes, Stethoscopes, peak expiratory flow, spirometers, pulse waveform, digital cameras, and weight scales. Patients transfer the biometric data via Bluetooth, Wi-Fi or plain old telephone lines (POTS) to our secured cloud-based system for ongoing surveillance and review by clinicians. With our care management by exception (MBE) process, our clinicians promptly intervene only when there is an adverse or abnormal reading. By tracking the results on a regular basis, clinicians can identify problems before they exacerbate...reducing costly trips to the ER and hospital.

In addition to the RPM, we can deploy the following telehealth technologies for patient care:

- ***Medication Management Technologies***
- ***Chronic Disease Management Technologies***
- ***Cognitive Fitness and Assessment Technologies***
- ***Social Connectedness and Networking Technologies***
- ***Safety Monitoring Technologies***
- ***Health and Wellness Monitoring Technologies***
- ***Assistive Technologies***
- ***Remote Training and Supervision***

Electronic Medical and Health Records (EMR/EHR)

EMR/EHR is our multipurpose, HIPAA-compliant system that is used to manage our clinical, patient data and health records.

Patient/Family Portal

Our HIPAA-compliant system that enables patients and families to access clinical information, review care plans, share feedback and verify caregiver tasks and shifts. Our social platforms minimize loneliness and isolation.

Caregiver Portal

The portal provides caregivers access to work schedules, assignments, care plans, time and payroll management seamlessly.

Personal Emergency Response System

A pendant call button that can detect falls and automatically call for help.

Automated Medication Dispensers

that remotely alert a nurse or family member if a dose is missed.
